Unlocking Africa's Tech Potential

About A2SV

A2SV | Africa to Silicon Valley is a nonprofit transforming Africa's future by preparing engineers who are defined by the results they deliver. Since 2019, A2SV has helped talented students across the continent grow into production-ready software engineers and founders. Alumni work at leading global companies and in ventures born from A2SV's incubator, showing how opportunity and responsibility unlock potential.

A2SV closes the gap left by theory-heavy education with free, intensive training that mirrors real engineering teams. Students work on real products with **code reviews, automated testing, CI/CD, performance and reliability targets, and clear ownership of features. Communication, leadership, and a growth mindset** are coached continuously so graduates add value from day one and build solutions that improve lives in the African continent.

A2SV Five Years of Impact

- ▶ **1,196 software engineers and tech entrepreneurs trained** across **22 African countries**
- ▶ **118 job offers** at top tech companies such as **Google, Amazon, Bloomberg, LinkedIn, Palantir, Databricks, and Meta**
- ▶ **180 alumni employed** within A2SV, serving as educators and project leads, strengthening quality and culture
- ▶ **13 digital products incubated**, tackling pressing needs in sectors such as health, education, employment, and finance
- ▶ **2 times hosted A2SV Hackathon, Africa's largest** AI-focused tech competition, engaging **4,900+ participants** from **48 African countries** in 2024.

A2SV's model prioritizes depth over breadth. Learners master **core computer science**, then specialize across **backend, frontend, mobile, AI, product, and design** while delivering real features under professional standards. The engineers featured in this catalog are the direct result of that preparation, ready to deliver value and drive innovation from day one.

Generation Three Students Celebrating Their Project Phase Kickoff

Your Bridge to Africa's Top Tech Talent

About Eskalate

Eskalate is the talent interface of A2SV. We connect global companies with Africa's top software talent who have trained in real product environments and know how to ship. Whether you need to **extend your team with world-class developers** or **have a full project delivered end-to-end**, Eskalate ensures you get reliable, production-ready results. Our people combine strong computer science fundamentals with day-to-day delivery skills such as code review, automated testing, CI/CD, observability, and clear communication. Teams that work with Eskalate ramp faster, keep quality high, and gain reliable time-zone overlap without sacrificing engineering standards.

Our candidates are selected for their **problem-solving ability, ownership, and collaboration**. Before placement, they build and operate production features that serve real users. That means they arrive ready to contribute in distributed teams, follow existing rituals, and deliver incremental value from week one. For outsourced projects, we assemble and manage squads that take responsibility for the full cycle, from discovery and design to development, deployment, and ongoing support. With Eskalate, you get production-ready contributors, complete project execution when needed, and predictable delivery from day one.

What We Provide

- ▶ **Full-Stack Developers:** Build end-to-end web apps across modern front end and back end stacks, API design, databases, testing, and cloud deployment
- ▶ **Front-End Developers:** Ship responsive, accessible interfaces with React or Vue, state management, component systems, performance budgets, and E2E tests
- ▶ **Back-End Developers:** Design secure, scalable services and APIs with Node, Python, Java, or Laravel, plus data modeling, queues, caching, and monitoring
- ▶ **Mobile Developers:** Android and iOS with Kotlin or Swift, and cross-platform with Flutter or React Native. Offline-first UX, push notifications, store releases

Why Companies Choose Eskalate

- ▶ **Production-ready from week one:** Candidates have 1,000+ hours of structured training plus real product experience with reviews, tests, and CI/CD
- ▶ **2-week free trial:** Evaluate skills, collaboration, and fit with no upfront commitment
- ▶ **Proven delivery:** 13 products shipped across health, education, and employment
- ▶ **Trusted by leading tech companies:** Alumni work at Google, Amazon, Palantir, and more

Elite Engineers Trained for Real-World Impact

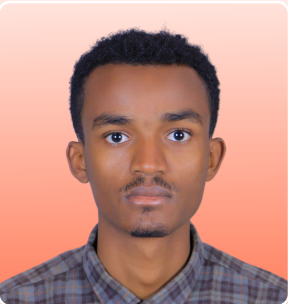

Meet Our Developers

Meet engineers you can drop into a squad on day one. They come from Africa's top universities and A2SV's most selective cohorts, the cream of the continent's tech talent. Each profile highlights products shipped, problems owned, and the tools they use to keep delivery predictable. We select for clear thinking, ownership, and crisp communication, so whether you need front end, back end, full stack, mobile, or ML, you get contributors who integrate fast and raise the bar.

Mobile Developers

Our mobile developers build fast, reliable apps for iOS and Android. They choose the right approach for your product, from a single Flutter codebase to native Kotlin or Swift, and deliver offline first UX, push notifications, analytics, and store releases. They adopt your ways of working from day one, matching code style, branching, CI/CD, issue tracking, and rituals like stand-ups and reviews. With performance budgets and automated tests, they ship polished features that scale and are ready for users.

Tech stack includes: Dart, Flutter, Kotlin, Swift, React Native, Firebase, REST APIs, GraphQL, SQLite, Room, Realm, Git, Fastlane, Figma.

MOBILE DEVELOPER

Abdulmajid Awol

📍 Addis Ababa, Ethiopia 📅 5+ Years of Experience

Mobile developer with experience in full-stack and mobile app development. Built an e-commerce app at Eskalate using Flutter, Dart, and BLoC. Skilled in API integration and testing with Mockito. Focused on scalable solutions and continuous growth.

MOBILE DEVELOPER

Hawi Abdi

📍 Addis Ababa, Ethiopia 📅 2+ Years of Experience

Mobile Developer passionate about building clean, user-friendly mobile apps with Flutter. Experienced in real projects like a mental health support platform. Skilled in Dart, JavaScript, React, and Firebase, with a strong drive to learn and grow.

- Java
- Adobe Illustrator
- Adobe Photoshop
- Flutter
- React.js
- Next.js
- HTML
- Express.js
- Node.js
- MongoDB

MOBILE DEVELOPER

Mahfouz Teyib

📍 Addis Ababa, Ethiopia 📅 3+ Years of Experience

Software engineer with experience in React, Django, and Flutter. Worked on AI-powered and cross-platform projects like NIGEDEASE and Hobbe. Focused on clean architecture and building impactful solutions.

- Flutter
- React
- TypeScript
- Django
- Next.js
- Full-Stack Development
- Mobile App Development
- REST API
- OpenAI API

MOBILE DEVELOPER
↗

Natnael Wondwoesn
 Addis Ababa, Ethiopia 3+ Years of Experience
 Mobile Developer building impactful, scalable solutions to solve real-world problems. He is proficient in Flutter, Python, Django, and React, and uses containerization tools like Docker and Kubernetes. His background also includes experience in Machine Learning.

Python Django React Flutter FastAPI Kubernetes Docker Rust

Git Tailwind CSS React Native Flask

MOBILE DEVELOPER
↗

Nebiyu Elias
 Addis Ababa, Ethiopia 2+ Years of Experience
 A passionate Software Engineer with a strong foundation in data structures and algorithms. He has hands-on experience building scalable Flutter apps and user-friendly web platforms, utilizing a modern stack that includes Flutter, Dart, React.js, Next.js, and TypeScript to deliver high-quality digital products.

Django Flutter React.js Dart Python TypeScript Next.js

Front-End Developers

Eskalate's **front-end developers** ship responsive, high-performance web apps that feel fast and intuitive on every screen size. Trained in real product environments, they turn complex designs into reliable interfaces, build accessible components, and instrument sites for SEO, analytics, and growth. Teams get contributors who slot into your workflow and deliver value from week one. Beyond visuals, our developers maintainable code, document patterns, and use CI to keep quality high as features scale.

Tech Stack Includes: HTML5, CSS3, JavaScript, TypeScript, React, Next.js, Tailwind, Redux, Zustand, React Query, REST, GraphQL, Jest, Playwright, Cypress, Storybook, Figma.

FRONTEND DEVELOPER
↗

Bemnet Kebede
 Addis Ababa, Ethiopia 2+ Years of Experience
 Frontend developer with 2 years of experience building fast, scalable apps using React, Next.js, and TypeScript. Skilled in turning designs into responsive UIs, optimizing SEO and performance, and integrating APIs with clean, secure code.

FRONTEND DEVELOPER

Yordanos Lemmawork

📍 Addis Ababa, Ethiopia 📅 2+ Years of Experience

Passionate Full Stack Software Engineer with 3 years of experience across React, Next.js, Golang, Node.js, Flask, ASP.NET, and Django. Skilled in building engaging frontends and robust backends to turn ideas into reality.

React.js
Python
Go
MongoDB

Back-End Developers

Eskalate's **back-end developers** design, build, and operate secure services that scale. Trained in real product environments, they turn requirements into clean APIs and reliable data models, then own performance and uptime in production. They implement authentication and role-based access, rate limiting and idempotency, background jobs and queues, async and thread based tasks, file storage, and full observability so systems stay fast and predictable.

Tech Stack Includes: Node.js, Express, NestJS, Python, Django, FastAPI, Go, Java, Spring Boot, REST, GraphQL, gRPC, PostgreSQL, MySQL, MongoDB, Redis, RabbitMQ, Kafka, Docker, Kubernetes, AWS, GCP.

BACKEND DEVELOPER

Adane Moges

📍 Addis Ababa, Ethiopia 📅 2+ Years of Experience

I'm a backend developer skilled in Go, RESTful APIs, and Clean Architecture. I build secure, scalable systems with JWT auth, role-based access, and MongoDB, backed by solid testing and documentation.

Product Showcase

This showcase features production-grade products built by A2SV engineers. Each project solves a concrete need, from maternal health to education, **with a focus on usability, reliability, and measurable outcomes**. Teams partner with real users and institutions, ship working software, and iterate from live telemetry and feedback. These are deployed tools in active use, not demos. For partners, they deliver scalable solutions that cut costs and improve service quality; for communities, they expand access and efficiency. Many products are multilingual, integrate with standard APIs, and are built to scale across regions. Explore the projects to see practical engineering, thoughtful design, and clear impact.

Our Approach

- ▶ **Solving Real-World Problems**

Our projects address pressing challenges across industries, providing technology that is reliable, scalable, and results-driven. From AI-powered platforms to digital health solutions, each product is built to create measurable impact and deliver tangible value for organizations and their users.

- ▶ **Built by the Talent We Train**

All products are developed by A2SV-trained engineers. By applying their expertise to production-grade projects, they bring innovation, precision, and efficiency to every solution. This model not only strengthens technical capabilities but also ensures partners benefit from a highly skilled and adaptable talent pool.

- ▶ **Optimized for Global Adoption**

We design with scalability and accessibility at the core. Whether adapting to local languages, integrating with existing systems, or meeting diverse compliance standards, our products are built to seamlessly expand across regions and markets. This localization-first approach maximizes reach, adoption, and long-term business value.

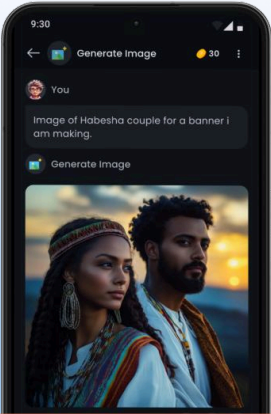

200+
Expecting Mothers

20+
Partner Hospitals

2000+
Community Members

Adot is a trusted digital health companion designed to support women across Africa throughout pregnancy and early motherhood. By combining personalized health insights, comprehensive tracking tools, and real-time access to midwives and gynecologists in local languages, it ensures that expert care is both accessible and culturally relevant. At the same time, Adot nurtures a strong peer-to-peer community where mothers can connect, share experiences, and find encouragement, helping to ease the emotional challenges and sense of isolation that often accompany this journey. This complete ecosystem not only improves maternal health outcomes but also empowers women with knowledge, support, and confidence, making the path to motherhood safer, more informed, and profoundly human.

AfroChat
Providing AI Solutions for Africa

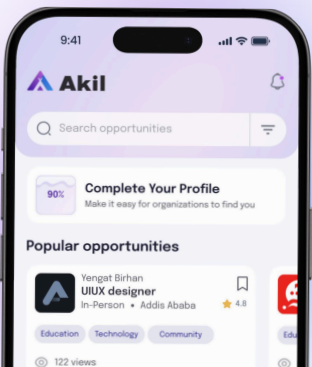

85
Countries

AI Models

71,000+
Messages

AfroChat is an application designed to make generative AI accessible and practical for the African community. It brings together leading AI models across language, image, and search, combining their unique strengths into one seamless, user-friendly experience. By aggregating these powerful tools, including advanced models such as GPT 5 and Grok 4, AfroChat delivers more accurate, versatile, and creative results than single-model apps, helping users unlock the full potential of AI. With a localized design and fast, intuitive interface, it serves entrepreneurs, creators, and everyday users alike, while a Telegram mini-app makes key features even more convenient and widely accessible.

Akil
Connecting Youth with Opportunities

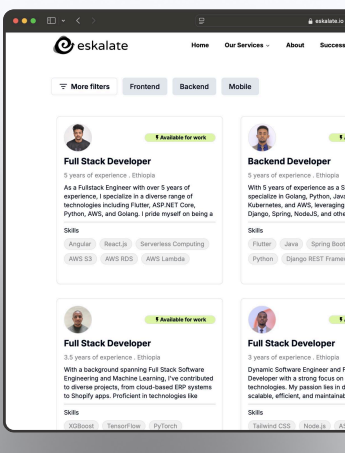

66
Active Organizations

157
Opportunities Created

2,254
Young Professionals Looking for Opportunities

Akil is a centralized career platform connecting African youth with professional opportunities. Using AI-powered matching, the platform helps young people discover jobs, internships, and volunteer roles that fit their skills. For organizations, it saves valuable time by using AI to handle the first review of applications, shortlisting the most qualified candidates for open positions. By making it easier for companies to hire and for talent to access meaningful work, Akil strengthens communities and makes career growth more accessible.

eskalate
Build and Scale Your Business with A2SV's Elite Offshore Talent

Products Developed

3+ Years
Hands-on experience before placement

Eskalate is a premier platform that connects global businesses with elite African software engineers, offering both direct talent outsourcing and complete project execution. Its strength lies in a direct pipeline from the A2SV academy, a rigorous training program that provides developers with over 1,000 hours of hands-on experience in problem-solving and real-world projects. This ensures every engineer is not only technically proficient but also an effective communicator and collaborator. In addition, all engineers gain practical experience with products, contributing from conception to production. By combining proven talent with real product expertise, Eskalate reduces hiring risks and delivers world-class results.

RateEat is an all-in-one dining platform designed to eliminate the uncertainty and inconvenience of finding a great meal. It tackles unreliable reviews and long wait times by combining a directory of restaurants with authentic, user-submitted feedback. The platform provides restaurants with modern tools, including a QR menu that lets customers scan to see a beautiful, personalized menu on their phones. Moreover, its standout pre-ordering system allows customers to select and pay for their meals before arriving at the restaurant. By empowering diners with reliable information and restaurants with modern tools, RateEat creates a seamless and enjoyable dining experience for everyone.

Questions solved

SkillBridge is an AI-driven learning platform designed to tackle the educational challenges facing high school students across Africa. It addresses widespread issues like overcrowded classrooms and lack of structured resources by providing a centralized hub for expert-verified study materials and personalized support. Using AI, SkillBridge delivers content aligned with national exams and offers interactive tools like gamified quizzes and step-by-step solutions for past papers. By personalizing the learning path, the platform helps students overcome systemic barriers and prepare for their future.

Conclusion

Great products ship when the right people own the work. Eskalate introduces you to **Africa's top developers trained through A2SV** who have already shipped and operated production features. They write maintainable code, test what they build, communicate clearly, and elevate the teams they join. You get contributors who blend strong computer science with day-to-day delivery habits like code review, CI, observability, and documentation.

We staff individual contributors or managed squads across **front end, back end, full stack, mobile, and machine learning**. Our developers are comfortable with modern stacks and cloud platforms, and they have worked on products in **health, education, fintech, and e-commerce**. They fit into existing rituals, collaborate across time zones, and keep security, performance, and reliability targets in view from the first sprint.

We start with a short discovery call to understand your goals, stack, and delivery timeline. Within **48 hours you receive a curated shortlist with profiles matched to your needs**. You can **interview, run a pairing session, or move straight to a two-week trial**. Once engaged, we help you onboard quickly, set clear success criteria, and establish reporting. You get weekly progress summaries, access to a success manager, and the option to scale the team up or down as priorities change.

Our approach **reduces ramp time and risk**. Developers arrive with **real product experience, proven problem-solving skills, and the communication habits needed for distributed work**. Many have helped launch products that serve thousands of users, and they bring those patterns to your roadmap. The result is predictable delivery, fewer surprises, and a team that gets better every iteration.

Book a meeting to scope your needs and start in one to two weeks. Tell us what you are building and we will match you with talent that fits your stack, time zone, and delivery goals.
